

## **Corflex Retools Production to Make Impactful PPE Donations to NH Hospitals**

**June 30, 2020 - Manchester, NH** – With the Covid-19 pandemic bringing the need for face masks and face shields to a critical level, Corflex retooled production and began manufacturing PPE to help alleviate these critical shortages. Immediately acting on calls from the State of NH, Corflex began the initial R&D phase and within 1 week was manufacturing level 1 type cloth face masks and face shields.

Corflex is a NH manufacturer of orthopedic products and is very familiar with the needs of the health care industry. “The Covid-19 pandemic is providing unprecedented challenges for each of us. It is a critical time and as a company we have adapted our product focus to include the production of PPE for the betterment of our community and employees. We are working with key personal at the state level on urgent need distribution and are committed to supporting and protecting all those on the front lines”, said Shelly Barnett, CEO Corflex.

“We are extremely proud of our employees and our willingness to put down everything and dedicate ourselves to this response. Whether at local hospitals or at our manufacturing facilities and corporate offices, we have come together in the spirit of collaboration. We remain committed to working alongside each other to support and help individuals and families through this healthcare crisis. We take seriously the opportunity to put US manufacturing to work”, said Ted Lorenzetti, Co-Founder Corflex.

“We recently had a request from one of our employees whose sister is a nurse at a hospital in Southern California. She and her fellow nurses were sharing a face shield and after each use they had to wipe it down and pass it along. When David brought this to our attention, we immediately shipped out face shields for each nurse on staff. Being able to help nurses on the front lines and giving David some peace of mind is what we are all about at Corflex, people above everything else”, said Paul Lorenzetti, Co-Founder Corflex.

Corflex recently donated face masks to the Manchester Easter Seals and Moore Center to help safeguard healthcare workers, individuals and families in local communities impacted by the Covid-19.

Focusing on safety, Corflex implemented split shifts in the manufacturing and distribution centers and while in the building employees are wearing face masks. All staff members who are able to work remotely are doing so. At this time, nearly all of the production space is dedicated to producing protective gear with plans to continue US manufacturing of PPE.

As we navigate an increasingly complex future and learn to adapt and evolve as a company, we continue to build on our mission of helping thousands of people remain safe and healthy during their everyday activities; whether it is a return to work, resumption of a sports activity or simply to live a more active life. We continue to work diligently, to look at product development through a strategic lens and approach innovation through continuous improvement for our customers, employees and neighbors.

**About Corflex Global**– Since 1984 Corflex Global has been manufacturing quality orthopedic products in the United States and providing outstanding service, competitive pricing and a lifetime product warranty. We understand the value of managing a product through its entire life cycle, from engineering and development to manufacturing and distribution. Our comprehensive range of services include consultative and solution-based platforms for fitting, billing and inventory management. We focus on optimizing revenue cycle management processes and implementing a seamless DME delivery program that maximizes physician and patient outcomes and financial performance.
